1 PURPOSE

1.1 To promote awareness of the risks associated with extreme heat in the workplace.
1.2 To provide direction regarding safe and efficient best practices in the workplace and prevent heat related illness and injury.
1.3 To ensure compliance with the Occupational Health and Safety Act.

2 SCOPE

2.1 All work areas and work stations utilized by McMaster University faculty, staff, volunteers, and students.

3 RELATED DOCUMENTS

3.2 Workplace Safety and Insurance Act, 1997
3.3 McMaster University RMM# 100 Workplace & Environmental Health and Safety Policy
3.4 McMaster University RMM# 101 Risk Management System
3.5 McMaster University RMM# 300 Safety Orientation and Training Program
3.6 McMaster University RMM# 324 Job Hazard Analysis Program

4 DEFINITIONS

4.1 ACGIH – American Conference of Governmental Industrial Hygienists
4.2 Employer – A person who employs one or more workers or contracts for the services of one or more workers and includes a contractor or sub-contractor who performs work or supplies services and a contractor or sub-contractor who undertakes with the owner, constructor, contractor or sub-contractor, to perform work or supply services.
4.3 ASHRAE – American Society of Heating, Refrigerating and Air Conditioning Engineers.
4.4 Fainting – loss of consciousness due to insufficient blood flow to the brain; frequently caused by some emotional or sensory stimulus.
4.5 Heat Cramps – painful muscle spasms, usually of the leg muscles, that occur after vigorous exercise, can also occur in the arms and stomach. No long-term problems should arise from heat cramps.
4.6 Heat Stroke – breakdown of the body’s cooling mechanisms causing core body temperature to exceed 41° Celsius; a life-threatening emergency causing unconsciousness and death if not promptly treated in hospital.
4.7 Acclimatization – a set of physiological adaptations; the process of an individual adjusting to a gradual change in their environment, such as temperature change. Full heat
acclimatization requires up to 3 weeks of continued physical activity under heat-stress conditions.

4.8 **Humidex** – an index that combines the effects of temperatures and humidity to quantify human discomfort due to perceived heat. [http://www.ccohs.ca/oshanswers/phys_agents/humidex.html](http://www.ccohs.ca/oshanswers/phys_agents/humidex.html)

4.9 **Relative Humidity** – the moisture content of air expressed as a percent of the maximum it can hold at a given temperature, (% RH). Optimum relative humidity for comfort is between 30% to 60%.

4.10 **Temperature** – expressed in degrees Celsius (ºC) or degrees Fahrenheit (ºF); optimum temperature for comfort is 22 to 24ºC (72 to 75ºF). Temperature preferences vary greatly among individuals.

4.11 **WBGT** – wet bulb globe temperature, an index used to quantify the true level of heat stress on an individual from the combined effects of air temperature, humidity, air movement, and radiant heat. The ACGIH “Work-Rest Regimen” table is based on wet bulb globe temperatures.

4.12 **Supervisor** – Person who has charge of a workplace or authority over a worker.

4.13 **Worker** – A worker is a person who has entered into or is employed under a contract of service or apprenticeship, written or oral, express or implied, manual labour or otherwise.

4.14 **Acronyms**

   - **CJHSC** – Central Joint Health and Safety Committee
   - **EHS** – Employee Health Services
   - **EOHSS** – Environmental and Occupational Health Support Services
   - **FHSc safety office** – Faculty of Health Sciences Safety Office
   - **JHSC** – Joint Health and Safety Committee
   - **MOL** – Ministry of Labour
   - **OHCOW** – Occupational Health Clinics for Ontario Workers
   - **OHSA** – Occupational Health and Safety Act
   - **RMM** – Risk Management Manual
   - **RMSG** – Risk Management Support Group
   - **WSIB** – Workplace Safety and Insurance Board

5 **RESPONSIBILITIES**

5.1 **Role of Senior Managers (Deans / Directors / Chairs / Managers):**

Senior Managers shall:

- provide the required resources and direction to support the work in Heat Stress Prevention Program and ensure issues are reviewed.
5.2 **Role of Supervisors:**

Supervisors shall:

- exercise due diligence for personal safety when assigning work in extreme heat, and shall ensure that all employees are familiar with first aid procedures for heat related injuries or illnesses;
- Follow the OHCOW Humidex Based Heat Response Plan (Appendix 1);
- the ACGIH recommended ‘Work-Rest Regiments’ (Appendix 2) shall be used as a guideline when assigning work in extreme heat;
- where applicable assign work in teams of two or more for personal safety in extreme heat and humidity and, when appropriate, sun safety precautions concerning Occupational Exposure to Sunlight ([http://www.ccohs.ca/oshanswers/diseases/skin_cancer.html#tphp](http://www.ccohs.ca/oshanswers/diseases/skin_cancer.html#tphp)); and
- ensure Injury/Incident Reports are filed with the EOHSS or FHSc safety office for all heat related injuries and illnesses.

5.3 **Role of Faculty, Staff, Students and Volunteers:**

Individuals shall:

- participate in the Heat Stress Prevention Program as identified by the Job Hazard Analysis;
- follow the best practice extreme heat guidelines for the work involved; and
- report any heat related injuries or illnesses to the supervisor immediately.

Individuals may:

- report extreme heat work concerns to the JHSC.

5.4 **Role of Environmental and Occupational Health Support Services:**

EOHSS shall:

- when requested, provide resources for training on heat stress prevention; and
- assist in investigations related to heat related injuries or illnesses.

5.5 **Role of Faculty Health Science Safety Office (FHSc Safety Office):**

Faculty Health Sciences Safety Office shall:

- when requested, provide resources for training on heat stress prevention; and
- assist in investigations related to heat related injuries or illnesses.

5.6 **Role of Central Joint Health and Safety Committee (CJHSC):**

The CJHSC shall:

- review the Heat Stress Prevention Program on a regular basis.
5.7 **Role of Joint Health and Safety Committees (JHSC):**

JHSC’s shall:

- receive all incident reports related to heat related injuries and illnesses in the workplace;
- where required by the Act, participate in the investigation of a heat related injury or illness; and
- report all extreme heat conditions noted during routine workplace safety inspections; and;
- review SOPs on heat stress prevention.

6 **EDUCATION AND AWARENESS**

Following websites:

- [http://www.wsib.on.ca/files/Content/PreventionHSGuide/HeatStressGuide.pdf](http://www.wsib.on.ca/files/Content/PreventionHSGuide/HeatStressGuide.pdf)

7 **RECORDS**

7.1 EHS will retain copies of all injury/incident reports, and keep records of all WSIB claims involving heat related injuries and illnesses or any other work related injury.
**Humidex Based Heat Response Plan**

**What is it?**

- The Humidex plan is a simplified way of protecting workers from heat stress which is based on the 2007 ACGIH Heat Stress TLV® (Threshold Limit Value®) which uses wet bulb globe temperatures (WBGT) to estimate heat strain. These WBGT's were translated into Humidex.
- The ACGIH specifies an action limit and a TLV® to prevent workers' body temperature from exceeding 38°C (38.5°C for acclimatized workers). Below the action limit (Humidex 1 for work of moderate physical activity) most workers will not experience heat stress. Most healthy, well-hydrated, acclimatized workers not on medications will be able to tolerate heat stress up to the TLV® (Humidex 2 for moderate physical activity). Between Humidex 1 and Humidex 2, general heat stress controls are needed and above Humidex 2 job-specific controls are needed.
- **Note:** in the translation process some simplifications and assumptions have been made, therefore, the plan may not be applicable in all circumstances and/or workplaces (follow steps #1-5 to ensure the Humidex plan is appropriate for your workplace).

*at Humidex exposures above 45, heat stress should be managed as per the ACGIH TLV®
Humidex 1, General Controls: General controls apply to unacclimatized workers and include providing annual heat stress training, encouraging adequate fluid replacement, permitting self-limitation of exposure, encouraging watching out for symptoms in co-workers, and adjusting expectations for workers coming back to work after an absence. Workers doing moderate work are considered acclimatized in Ontario only if they regularly work around heat sources (e.g. in foundries, around ovens, etc.). NOTE: clothing and radiant heat must also be taken into account when using this guideline (see steps #1-5 outlined on page 3).

Humidex 2, Job-Specific Controls: Job-specific controls include (in addition to general controls) engineering controls to reduce physical job demands, shielding of radiant heat, increased air movement, reduction of heat and moisture emissions at the source, adjusting exposure times to allow sufficient recovery, and personal protective equipment that provides for body cooling.
Appendix 2
Heat Stress Guidelines and References

Recommended Work-Rest Regimens for Outdoor Work
All temperatures are in units of wet bulb globe temperature (WBGT) degrees Celsius. The recommendations are designed to prevent the core body temperatures of fit, acclimatized workers from rising above 38 °C.

Recommendations for Work in Hot Environments
- Wear light-coloured clothing for working outside to allow free air movement and sweat evaporation.
- Increase the frequency and length of rest breaks.
- Schedule hot jobs at cooler times of the day.
- Provide cool drinking water and consume a cup every 20 minutes or so.
- Make sure everyone is properly acclimatized.
- Recognize the signs and symptoms of heat stress and use a “buddy system” since people are not likely to notice their own symptoms.
